

Agents

Create agent

Create a New Agent

This endpoint allows you to create a new conversational agent. Agents are the core building blocks of Leaping AI that handle conversations with users across various channels.

About Agents

An agent consists of:

- **Name:** A unique identifier for the agent
- **Fields:** Data fields that store information during conversations
- **Stages:** Different phases of the conversation flow
- **Functions:** Capabilities the agent can use during conversations

Request Body

The request accepts a JSON object with the following properties:

- `name` (string, required): The name of the agent
- `frontend_nodes` (array, optional): Node data for frontend visualization
- `frontend_edges` (array, optional): Edge data for frontend visualization
- `deprecated_nodes_data` (any, required): Legacy nodes data
- `fields` (array, optional): Custom fields for the agent, in addition to the default reserved fields
- `summary_config` (object, optional): Configuration for conversation summarization

Response

On success, the endpoint returns:

- Status code: `201 Created`
- Body: JSON object containing the complete agent configuration, including system-generated fields

Important Notes

- Once created, you'll need to create snapshots of the agent to deploy them
- Fields prefixed with `leaping_` are reserved for system use
- The created agent will be associated with your user account

Common Errors

- `422 Unprocessable Entity` : If the request body contains invalid data
- `403 Forbidden` : If you lack permissions to create agents

Example

```
curl -X POST "https://api.leaping.ai/v1/agents/" \
-H "Content-Type: application/json" \
-H "Authorization: Bearer YOUR_TOKEN" \
-d '{
  "name": "Customer Service Agent",
  "deprecated_nodes_data": {},
  "fields": []
}'
```
