

Essentials

Home area

Overview of all AI agents

Home tab

You can make a new voice AI agent by clicking on the “Create Agent” button. It will ask you to specify the name, description and group of the agent. Under group, either select your company or leave it blank.

You also have the option of cloning an existing template agent to modify it. Alternatively, you can export and import an existing template agent. These options can be accessed by clicking on three dots next to an agent and choosing the respective option.

Telephony tab

Here you see an overview of all the phone numbers in your account and to which voice AI agent they are respectively assigned.

We allow you to bring your own Twilio phone number. For this, press the “Add Phone Number” button and enter the respective details of the phone number you bought on Twilio.

We currently do not support phone numbers from other sources outside of Twilio.

Usage tab

Here, you can monitor the number of minutes of conversation with the voice AI agent. Make sure to select the correct group if relevant.

Total duration = number of conversation minutes by Leaping AI bot + number of conversation minutes after Leaping AI bot handed off the conversation to an human

Leaping duration = number of conversation minutes by Leaping AI bot

IAM tab

In this tab, you can see the users of the Leaping platform within your organisation.

Editor = can view agents and modify them

Viewer = can view agents but not modify them

If you would like to add additional users, please reach out to kevin(dot)wu(at)leapingai(dot)com

Settings tab

In this tab, you can configure two-factor authentication and a password change.

Two-factor authentication

Enabling this feature necessitates the usage of an authenticator app (e.g., Google Authenticator)

Next to username and password, the login process involves entering a code specified in the authenticator app.
